METZ CONNECT

## Digital Input module BMT-SI4

11088913

## 1. Description

he BACnet MS/TP module with 4 SO inputs to DIN EN 62053-31 lass A was developed for decentralized switching tasks. It is suitable for counting SO counter pulses. This allows very good integration of the module into an energy controlling system. In case of a power ailure, the last counter readings are saved. The inputs can be scanned ddressed and the baud rate is set by means of two address switches on the front.
Suitable for decentralized mounting in serial sub-distributor.

## 2. Declaration of Conformity

The device was tested according to the applicable standards. Conformity was proofed. The declaration of conformity is available at the
manufacturer METZ CONNECT GmbH. Nes Re

## Notes Regarding Device Description

These instructions include indications for use and mounting of the device. In case of questions that cannot be answered with these in structions please consult supplier or manufacturer.
The indicated installation directions or rules are applicable to the
 national directions.
Safety Instructions
Keep the applicable directions for industrial safety and prevention of accidents as well as the VDE rules.
Technicians and/or installers are informed that they have to electrically discharge themselves as prescribed before installation or maintenance of the devices.
Only qualified personnel shall do mounting and installation work with the devices, see section "qualified personnel"
The information of these instructions have to be read and
Symbols
Warning of dangerous electrical voltag
Danger
means that non-observance may cause risk of life, Qualified Personnel
Qualified personnel in the sense of these instructions are persons who are well versed in the use and installation of such devices and whose professional qualification meets the requirements of their work
This includes for example:

- Qualification to connect the device according to the

VDE specifications and the local regulations and a qualification to put this device into operation, to power it down or to activate it by respecting the internal directions.

- Knowledge of safety rules.
- Knowledge about application and use of the device within the equipment system etc.

## 6. Mounting

Power down the equipment
Mount the modulu on standard rail (TH35 per IEC 60715 in junction boxes and/or on distribution panels). Installation
Electric installation and device termination shall be done by qualified persons only, by respecting all applicable
specifications and deequations
Plug in the terminal block for bus connection

The module can be aligned without interspace. Use the jumper plug
to connect bus and supply voltage when the modules are mounted to connect bus and supply voltage when the modules are mounted
in series. seres.
he maximum quantity of modules connected in line is limited
to 15 or to a maximum power consumption of 2 Amps (AC or to 15 or to a maximum power consumption of 2 Amps (AC or
DC) per connection to the power supply. For any similar block of additional modules a separate connection to the power supply is mandatory.

## 7. Network address and bit rate setting

## Configuration Switches

Hexadecimal Switches $\times 10, \times 1$ define the Network-Address
$00-$ F9; e.g. F9h $=15 \times 16+9=249 \mathrm{~d}$ ) and Baudrate ( $\mathrm{FA}-\mathrm{F}$ ). - Turn Switch $\times 10$ to E (Device is temporaryly configured as Slave) - Turn Switch $\times 1$ to $A-F$ to select Baudrate

- Turn Switch $\times 10$ to $F$, wait 1 Second
- Red and green LEDs are blinking when Baudrate ist stored in

EEPROM
Turn Switch $\times 10$ to select Network-Address

- Turn Switch $\times 1$ to select Network-Address

| Address switch $\times 10$ | F | F | F | F | F | F |
| :--- | :---: | :---: | :---: | :---: | :---: | :---: |
| Address switch $\times 1$ | A | B | C | D | E | F |
| Bit rate (Bit/s) | 9600 | 19200 | 38400 | 57600 | 76800 | 115200 |

Factory setting: $9600 \mathrm{Bit} / \mathrm{s}$
